John,

Just got off the phone with Eric. What's your availability over the next two weeks to meet with Eric, me, Jim McKenna and a few others to go over some of the big picture benthic ecorisk issues? Eric mentioned that you may have an additional way of looking at the floating percentile model results worth discussing. We have a number of reliability statistical issues to tee up with you that apply to all of the sediment quality benchmark derivation methodologies, and also apply to RSET and the upcoming effort by Ecology here in Washington to promulgate freshwater sediment quality standards.

Monday next week (July 12) is probably too soon to meet. I'm unavailable the 13th and 14th, but am available the 15th and 16th next week, also available Monday and Tuesday the following week (July 19-20), then I'm off to Phoenix for the rest of the week to the same copper symposium Dave DeForest is scheduled to attend. The entire week of July 26th is tied up with an Upper Columbia River site meeting in Spokane. (b) (6)
